DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 33-43, drawn to an IC design method, classified in class 716, subclass 10.
- II. Claims 44-58, drawn to an IC circuit, classified in class 716, subclass 8.
- III. Claims 59-64, drawn to an IC design process, classified in class 716, subclass 4.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, Group II, and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group I has separate utility such as optimizing sub-circuits to obtain desired levels of operating speeds. Invention Group II has separate utility such as predefining sub-circuit connection points. Invention Group III has separate utility such as testing sub-circuit models. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Robert Colwell on 1 June 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
